## **National conference on IEM by Department of Biochemistry SBMCH & MEU on 25-01-2020**

The diagnosis of inborn errors of metabolism (IEM) takes many forms. Due to the implementation and advances in newborn screening (NBS), the diagnosis of many IEM has become relatively easy utilizing laboratory biomarkers. For the majority of IEM, early diagnosis prevents the onset of severe clinical symptoms, thus reducing morbidity and mortality. In recent years, advancement in technologies such as tandem mass spectrometry (MS/MS) and next-generation sequencing (NGS) employing a massive parallel sequencing strategy, have profoundly expanded our knowledge of IEM and metabolic disorders in general. These new technologies have also allowed for the expansion and improvement of new-born screening (NBS) on a global scale.

Vice Chancellor of Bharath Institute of Higher Education and Research, Dr.V.Kanagasabai, honoured our Chief Guest.
