## **WORLD ANATOMY DAY Organized by the Department of Anatomy Conducted on 15-10-2020**

Human anatomy, the study of the structure of the human body, has been crucial to developments in modern medical science. The past decade in particular has seen technological developments in medical imaging that, despite having greatly advanced visual representations of the interior of the body, also reveal how little we genuinely understand our detailed anatomy.

15 October 2020 is the first International Anatomy Day, providing anatomists with an opportunity to both celebrate anatomical advances like these, as well as convey the need for more research and development in the field. This day marks the anniversary of the death of Andreas Vesalius in 1564, who is considered to be the founder of modern human anatomy. The observations Vesalius made overturned misconceptions in anatomy that had prevailed for centuries.

## **Department of Anatomy conducted an awareness programme on WORLD AIDS DAY - 01-12-2020**

World AIDS Day on 1<sup>st</sup> December brings together people from around the world to raise awareness about HIV/AIDS and demonstrate international solidarity in the face of the pandemic.

The day is an opportunity for public and private partners to spread awareness about the status of the pandemic and encourage progress in HIV/AIDS prevention, treatment and care around the world. It has become one of the most widely recognized international health days and a key opportunity to raise awareness, commemorate those who have died, and celebrate victories such as increased access to treatment and prevention services.

## Department of General surgery conducted Journal Club on 24-12-2020

Moderator : Dr.K.S.RAVISHANKAR , DR.C.SRINIVASAN

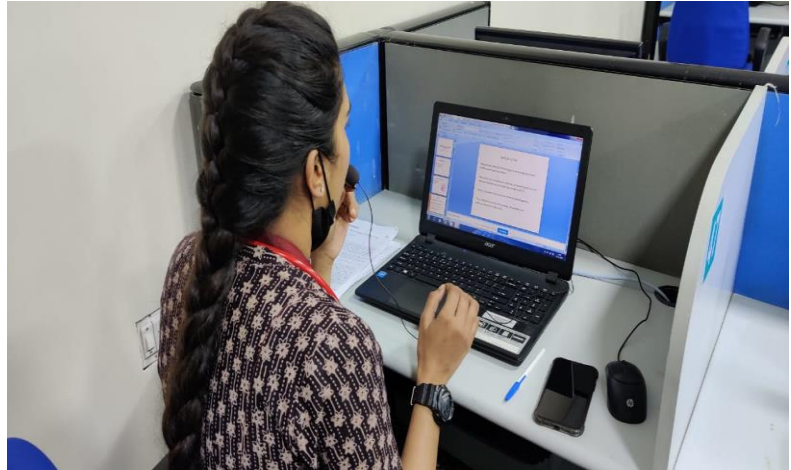

1.Dr. VISHNUPRIYA ,2.Dr. NARENDRAN ,3.Dr. RAJIV,4.Dr .TARUN TEJA

1. – Virtual ileostomy in elective colorectal surgery: a systematic review of the literature

2. – Evaluation of gasless laparoscopy as a tool for minimal access surgery in low to middle income countries: A phase II non inferiority randomized controlled study

3. – Small bites versus large bites for closure of abdominal midline incisions (STITCH): A double – blind, multicentre, randomized controlled trail

4. – Truncal vs branch ligation of inferior thyroid arteries in total thyroidectomy: Does it affect postoperative hypoparathyroidism?

## Department of Paediatric conducted Common Dermatological problems in paediatric practice”

Skin disorders are common in Pediatric age group. Children may have a primary skin disorder or a coexisting skin disorder or may have a primary systemic disorder with cutaneous manifestations. These children may present to a Dermatologist or more commonly to a Pediatrician. Dermatological conditions constitute 30% of all outpatient visits to a pediatrician, and 30% of all visits to dermatologists are by children. Almost all specialties require the services of a dermatologist during the management of their patients. In a previous study out of all dermatology consultations, 11.7% were from the pediatrics department. Referrals by pediatrician to a dermatologist can be from their outpatient department (OPD), inpatient department and from casualty. Skin disorders have been estimated to

represent 4% of all pediatric emergency care unit visits, with only 30% of these being true emergencies. The diagnoses and impact of inpatient consultations have been detailed for adult Dermatology. However, there is meagre data on this in pediatric age group.

Interesting findings observed in the available literature on the issue are: relative inability of most referral doctors to diagnose skin diseases accurately and marked changes in dermatologic diagnoses and treatment resulting from dermatologic consultation.<sup>a</sup> There are very few reported studies on dermatology referrals from pediatrics department including different domains, as for pediatric emergency, inpatient care, outpatient care or overall. As there is paucity of studies in this regard, we conducted this study to delineate the pattern of referrals from pediatric medicine.
